

Easy Field Strength Meter – v2

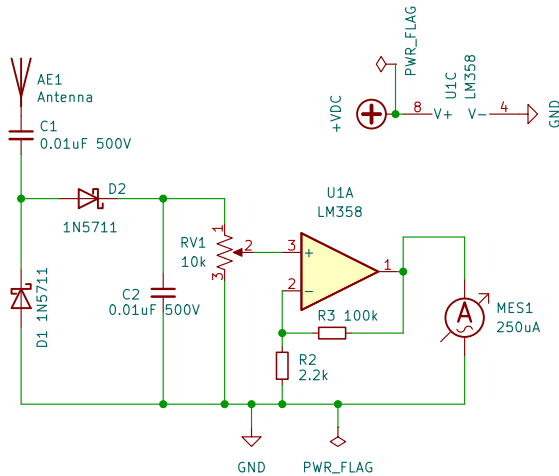

Note: RV1 pot controls the 'sensitivity'. VDC is 9 volts.

Note: Original BAT62 Dual Diode can also be used.

MES1 (ammeter) is actually a DMM in our case.

Testing results:

- BaoFeng UV-5R 'induces' more than 10v at a distance of 3 feet.
- IC-7300 (@50W) induces more than 8v at a distance of around 6 feet.
